AKKINENI NAGESWARA RAO COLLEGE (AUTONOMOUS) :: GUDIVADA
Report on World AIDS Day on 1st December 2023

In the early days, the artists made the ribbons themselves and distributed them around New York art galleries and theatres. Initially, they included some text to explain the ribbon's significance, but as the ribbon became more famous, this was no longer needed.

Within weeks, the red ribbon could be seen in such high-profile places as the red carpet of the Oscars. The media took notice and, within a short space of time, the symbol became universally recognized. At the Freddie Mercury Tribute Concert, held at London's Wembley Stadium on Easter Sunday, 1992, more than 100,000 red ribbons were distributed among the audience, with performers such as George Michael wearing one.

The red ribbon continues to be a powerful force in the efforts to increase public awareness of HIV. It has inspired other charities to utilise the symbol, such as the pink breast cancer awareness ribbon.

The Red Ribbon Club of ANR College under the aegis of IQAC has organized an event on World AIDS Day on 01-12-2023. 1st December is observed as World AIDS Day every year. World AIDS Day brings together people from around the world to raise awareness about HIV/AIDS and demonstrate international solidarity in the face of the pandemic. The theme of World AIDS Day 2023 is "End inequalities. End AIDS". With a special focus on reaching people left behind, WHO and its partners are highlighting the growing inequalities in access to essential HIV services. HIV remains a major public health issue that affects millions of people worldwide.

Although the world has made significant progress in recent decades, important global targets for 2023 were not met.

Division, disparity and disregard for human rights are among the failures that allowed HIV to become and remain a global health crisis. Now, COVID-19 is exacerbating inequities and disruptions to services, making the lives of many people living with HIV more challenging.

The theme of World AIDS Day 2023 is "End inequalities. End AIDS". With a special focus on *reaching people left behind*, WHO and its partners are highlighting the growing inequalities in access to essential HIV services.

On 1 December 2023, WHO is calling on global leaders and citizens to rally to confront the inequalities that drive AIDS and to reach people who are currently not receiving essential HIV services.

Learning Outcome:

The conclusion that the AIDS agent was blood-borne rested on two findings. First, AIDS was occurring in transfusion recipients and individuals with hemophilia who had received AHF concentrate; these AIDS patients did not belong to any other known high-risk group for contracting AIDS.
